KT0005

Introduction

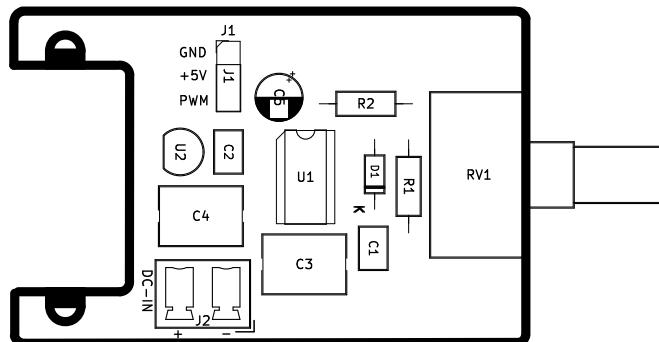

This module offers a practical and versatile solution for controlling small servo motors, specifically the popular DG90 9g servos. Leveraging the capabilities of the 555 timer IC, it generates Pulse-Width Modulation (PWM) signals that regulate the servo motor's rotation angle.

- **Flexible Control:** An onboard potentiometer provides granular control over the servo motor's rotation angle, allowing for precise adjustments to suit various applications..
- **Integrated Servo Mounting:** The PCB is designed to accommodate the direct mounting of servo motors, streamlining the assembly process and ensuring a secure connection.
- **Versatile Applications:** This module is ideal for a wide range of projects, including entry-level robotics, toys, and model-making. It's perfect for testing servo motor behavior and implementing basic servo-based mechanisms.
- **Compact design:** The small and compact module is ideal for space-constrained applications.
- **Applications:**
 - Entry-level robotics
 - Toys
 - Robotic experiments
 - STEM kits

Identify connectors and adjustments

Top Side

KT0005

J1 - Serco Motor Connection

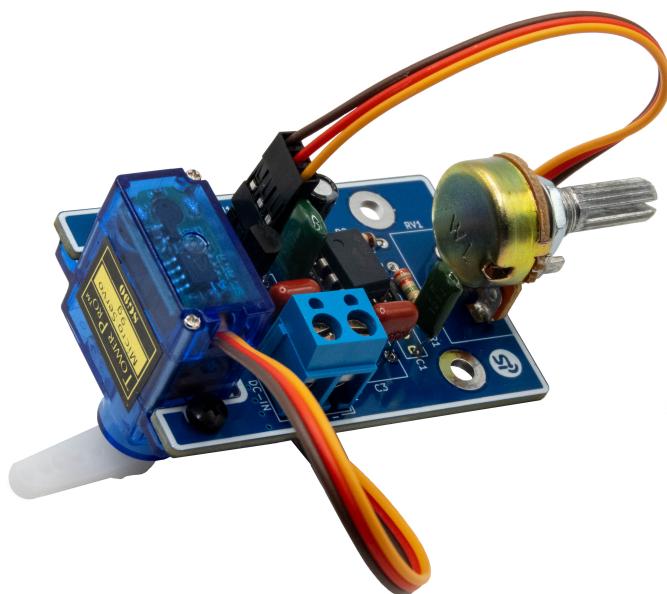

J2 - DC In.

RV1 - Controller

C1	0.01µF/50V	(THT)
C2	0.022µF/50V	(THT)
C3,C4	0.1µF/50V	(THT)
C5	10µF	(THT)
D1	1N4148	(THT)
J1	2.54mm - 3Pin	
J2	5.08mm - 2Pin	
R1	2.2MΩ	(THT)
R2	15KΩ	(THT)
RV1	100kΩ (LOG) Potentiometer	
U1	NE555P	(THT)
U2	L78L05	(THT)

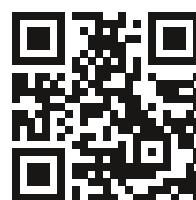

How to use

1. Connect the DG90 9g with J1 pin header.
2. Connect DC power source to J2 screw terminal.
3. Control the Servo motor with RV1 potentiometer.

Servo motor can be mounted to the PCB with 2 M3 screws

Kit specifications

Control interface.....	Analog
Power.....	DC 5V - 7V / 1000mA
Type of the actuator.....	DG90 9g or equivalent servo
Output.....	PWM
Dimensions.....	56.50×37.0mm
